

Tip Sheet: LOST DOG BEHAVIOR

by: Kathy “Kat” Albrecht

Dogs travel different distances when they are lost. Understanding the following environmental and behavioral factors and taking appropriate action will increase the chances that you will recover your missing dog:

Factors That Influence Distances Traveled: There are six major factors that influence the distances that lost dogs travel: Temperament, Circumstances, Weather, Terrain, Appearance, and Population Density.

TEMPERAMENT OF THE DOG – How a dog behaves towards strangers influences how far it will travel (when lost) before someone intervenes and rescues it. There are three primary behavioral categories that lost dogs are classified into: Gregarious Dogs, Aloof Dogs, and Xenophobic Dogs.

Gregarious Dogs: Wiggly-butt, friendly dogs are more inclined to go directly up to the first person who calls them. Depending on the terrain and population density where the dog was lost, these dogs will generally be found fairly close to home or will be picked up by someone close to the escape point. Gregarious dogs are often “adopted” by individuals (not shelter or rescue workers) who find them.

Aloof Dogs: Dogs with aloof temperaments are wary of strangers and will initially avoid human contact. Eventually, they will be inclined to accept human contact once they have overcome fear issues and become hungry enough. While these dogs can travel a great distance, aloof dogs eventually can be enticed with food and patience, typically by experienced rescuers who know how to approach and capture a wary dog. These dogs are often recovered by rescue group volunteers, and their wariness can be easily misinterpreted as “abused.” In addition, these dogs are often not recovered for weeks or months after their escape, giving them the physical appearance (thinness, injuries, stickers, ticks, etc.) that they are homeless, abused, and unloved.

Xenophobic (Fearful) Dogs: Xenophobia means “fear or hatred of things strange or foreign”. Dogs with xenophobic temperaments (due to genetics and/or puppyhood experiences) are more inclined to travel farther and are at a higher risk of being hit by cars. Due to their cowering, fearful behavior, people assume these dogs were “abused”, and even if the dog has ID tags, they will refuse to contact the previous owner. Some of these panic-stricken dogs will even run from their owners! It may be necessary to use other dogs to get close enough to capture them or to use baited dog traps.

CIRCUMSTANCES SURROUNDING THE DISAPPEARANCE – A dog that digs out from a yard to explore a scent will tend to travel a short distance before it is found—meandering and doubling back as it explores a scent. On the other hand, a dog that bolts in panic due to fireworks or thunder will take off at a blind run and can run for several miles.

WEATHER – A dog that escapes on a beautiful spring day may travel farther than one that escapes in a snow storm. Extreme weather conditions (snow, hail, rain, and sweltering heat) will decrease the distances that lost dogs travel.

TERRAIN – A dog that escapes in a residential area will not travel as far as a dog that escapes in a mountainous area. Fences that create barriers will influence a dog’s travel since a dog will tend to take the “path of least resistance” when traveling. Cactus, heavy brush, and steep cliffs can be barriers that influence whether or dog continues on a path or changes directions.

APPEARANCE OF THE DOG – What a dog looks like can influence how quickly it will be picked up by a rescuer. In general, most people are less inclined to pull over and attempt to grab a loose Pit bull they perceive as being “aggressive” than they would a “friendly” wiggly Labrador Retriever. Also, size matters: people are more inclined to pick up small dogs - they look vulnerable and are easier to transport and house than large dogs. In addition, people are more likely to attempt to rescue a purebred dog that they perceive to have value than a mixed breed dog. When average motorists see a mixed breed dog trotting down the sidewalk, their impression is often that the dog belongs in the neighborhood or that it is a homeless stray. But when those same people see a Boston Terrier, they are inclined to believe that, because it is a “valuable purebred dog”, it must be a lost pet.

POPULATION DENSITY – A dog that escapes in Manhattan will travel a shorter distance than will a dog that escapes in the Rocky Mountains or in rural farmland. When dogs escape into areas with a high number of people, their chances of being found close to the escape point are increased. But in areas with an extremely low number of people, they tend to travel further and their chances of being found close to the escape point are decreased. A dog that escapes in the middle of the night will travel farther before being seen than a dog that escapes during rush hour traffic.

Rescuer Behaviors That Create Problems: People who find stray dogs often misinterpret the dog’s behavior: they assume that the cowering, fearful dog was “abused” when in fact the dog has a xenophobic temperament and has been shy and fearful since it was a puppy, due to genetics and puppyhood experiences. Dogs found in rural areas are often assumed to be “dumped” and homeless; many rescuers never think this could be a dog that was *lost*. Some people who find a stray dog that does not have a collar automatically assume it is “homeless” and therefore they immediately work to place the dog rather than attempt to find the dog’s owner. In addition, the first place where the owner of a lost dog will search for their dog – the local shelter – is typically the last place that someone who finds a loose dog will take it (due to the fear of euthanasia)!

Unique Lost Dog Recovery Tips: The most important thing that you can do correctly to recover a lost dog is to properly MARKET the fact that your dog is missing. This can be accomplished by some unique methods such as creating giant, neon REWARD LOST DOG posters, having 4 friends stand on a street corner at a major intersection near where your dog escaped and “protest” the disappearance with neon signs (known as an “Intersection Alert”), and “tag” your car with florescent neon markers listing your lost dog’s description and your phone number. All of these tips are listed on Missing Pet Partnership’s web site at www.missingpetpartnership.org under the RECOVERY TIPS section. In addition, if your dog has a skittish, shy temperament you do NOT want to call your dog if you see him! Looking directly at, walking towards, patting your leg, or calling a panicked dog will only cause it to run in fear. Missing Pet Partnership offers consultation services to help guide dog owners in how to strategically recover a panicked dog.

For more information on lost pet behaviors, effective advice on lost pet posters, and a national network of professional and volunteer pet detectives, visit www.missingpetpartnership.org or e-mail Missing Pet Partnership at info@pethunters.com for lost pet recovery assistance.

Missing Pet Partnership is a 501(c)(3), nonprofit corporation whose mission is to reunite lost companion animals with their owner/guardians. Our vision is to ultimately develop volunteer lost pet search-and-rescue teams in communities nationwide. If what you read here was beneficial to you, please consider supporting our mission! Tax deductible donations can be made with PayPal (via our website) or made out to “Missing Pet Partnership” and sent to: Missing Pet Partnership, P.O. Box 3085, Federal Way, WA 98063.
